Martin Grimnes  
Arcadia Alliance

Dear Mr Grimnes,

On behalf of the employee owners of ReVision Energy, I am happy to provide this letter of support to the consortium to develop an electrified carbon fiber passenger ferry in Maine's midcoast. ReVision Energy is a Maine based, employee owned certified B Corp and our mission is to help transition New England away from fossil fuel dependence and towards a clean, sustainable, equitable renewable energy future. Beneficial electrification, and specifically the electrification of transportation is an absolutely critical part of that clean energy transition here in Maine.

Since 2003, ReVision has been active around the region in developing and building both clean energy and clean transportation infrastructure to help effectuate that transition. Though we have lots of work to do throughout the transportation sector, Maine has a unique opportunity to lead in the electrification of maritime industries and we are delighted to see Maine companies and Maine tradespeople rising to the challenge.

An electrified, solar powered passenger ferry built for Isleboro could be a model for ferries throughout Maine and up and down the eastern seaboard and provide an amazing opportunity for the integration of Maine's long shipbuilding tradition and our growing world class technology cluster in composites and advanced materials.

ReVision Energy is excited to lend our support to this innovative project and we encourage ME-DOT and other State leaders to provide support to help do right be our island communities, while also launching a new, innovative industry here in Maine. We stand ready and eager to help in any way we can and wish your consortium the best of luck with the project.

Best Regards,

Fortunat Mueller  
Co Founder, President
